

From David Bohm to C.S. Andrews and J.E. Beichler 10-31-23

Dear Alex,

To place our correspondence in the chat, I've combined my email to you joined with the pdf I offered.

Perhaps our modeling of the magnetic A-vector field in the brain - below - might prove helpful? As well as the [non-local empirically-tested consciousness research](#) I contributed to at the Mind Science Foundation.

A summary overview of our publications and a project proposal follows these opening words. Potential developments in technology include: Sentient AI, Access to Unlimited Energy, and so much more.

Papers offering additional validation of 'our SOFT model' are available on Academia.edu: e.g., Astronomical observations show that the 3D magnetic scalar B-field axes of all the galaxies in the universe follow the right-hand-rule relative to their spiral arms. This means that they point in the same direction relative to each other (in 4-D space) even though they point in any orientation in 3D space. Their North pole axes align through a single axis which corresponds to the magnetic vector potential A-field in 4-D which unites all the 3D B-fields. It is logical mathematically that this singular 4D potential field localizes the non-local whole, orchestrating, organizing, and ensuring 'the' spaceless-timeless 'continuity' of all the 3D electromagnetic and gravity fields.

As you likely know: Quaternions were invented by William Hamilton in 1843 and can be used to describe 3D rotations in 4-D space. Otherwise, 3-D mathematics (vectors and vector algebra) are unable to describe 3-D motions (other than straight linear) without introducing physical pseudo-forces such as centripetal, centrifugal, Coriolis as well as both Dark Energy and Matter.

Maxwell reformulated his equations to delineate the electromagnetic quantities of a singular 4D magnetic A-vector 'space' that continuously unites and coordinates all 3D electromagnetic B-fields. It is evident within Maxwell's original equations as well as the vector equations invented by Heaviside to describe the relationship between the vector potential A and the scalar potential B.

Introductions, interviews, and collaborations are welcome.

Wholeheartedly,

Sperry Andrews

"The laws of physics must appear the same to every observer." - A. Einstein

From working 'independently' for forty years, we now share a seven year theoretical physics partnership, to explore "how point-centered processes could generate all phenomena: the expansion of our universe, a Self-organizing non-material consciousness, with dimensional byproducts and measurements re-producing what is physical, emotional, mental, soulful, and spiritual." (2019) p.15

From David Bohm to C.S. Andrews and J.E. Beichler 10-31-23

“Before that moment of time [i.e., the beginning of spacetime], all science has to rely on is unfounded speculation, or at least that was the situation before Riemannian geometry was modified by incorporating point-elements when Andrews developed his intuitive notion of a 0-D point Void. Everything in our scientific model of reality changes by adopting the 0-D point Void as the original Riemannian point-element from which our more advanced Riemannian space-time structure of physical reality evolved.” - James E. Beichler, PhD (2017) p.4

Overview: How can observation be ‘independent of absolute space and time’? Can a non-existent ‘absence’ flawlessly and continuously orchestrate the emergence of spacetime, energy, matter, and meaning, to fully function as Bohm’s Implicate order?

In Bohm’s ‘Soma-Significance’ an observation gives rise to a unique spatiotemporal measurement structure, which in-turn gives rise to the next unique observation.

In our SOFT model, quantum and classical theories are shown to be wholly compatible. The complementarity of quantized measurements and deterministic classical observations localize the nonlocal (4D) whole throughout every (0D/3D) point location.
